SUMMARY

Experienced DevOps / Site Reliability Engineer with more than 5 years in modern Infrastructure development. My expertise lies in infrastructure automation, server-side security and optimization, microservices, and public cloud especially AWS. I excel in CI/CD pipeline implementation, managing complex and vast cloud environment, and utilizing Kubernetes. Proficient in automating cloud infrastructure using Terraform and Ansible, ensuring seamless auto-provisioning. Skilled in auditing for cloud infrastructure effectiveness and cost optimization. Specialize in deployment strategies like blue/green deployment to minimize downtime. Automate the entire process from code commit in version control system to dev and staging environment, Alarm and monitoring system with Prometheus and Grafana. Adept at providing insights for cost optimization and effectively auditing cloud infrastructure.

EXPERIENCE

Site Reliability Engineer

PT Trix Games Studio

May 2022 - Present, Dubai, United Arab Emirates

- Pioneered the use of IaC using Terraform, enabling predictable deployments and environment stability, which cut down release cycle time by 40%.
- Automated routine maintenance tasks and application deployments with Python and Ansible, improving deployment and provisioning efficiency, by 50%.
- Improve CI/CD pipelines in Jenkins significantly decrease the deployment time and enabling more frequent feature releases.
- Implemented Pod Quarantine Strategy for Secured Kubernetes Deployments.
- Optimized AWS resources such as VPC, S3, decoupling stateless applications with Lambda, Beanstalk for dev and PoC.
- Initiated and Implemented Bi-Weekly Infrastructure Review Cycles to Enhanced infrastructure efficiency and reliability by establishing a systematic 2-week review cycle.
- Mentored a team of 5 to 10 junior DevOps engineers and full-stack developers on infrastructure deployment, especially in Kubernetes.

Senior DevOps

Wirglobal (PT WIR ASIA, tbk)

February 2022 - January 2024, Kebon Jeruk, Jakarta, Indonesia

- Led the implementation of Docker and Kubernetes for better resource management and deployment, reducing deployment time by 50%.
- Improve the current infrastructure deployment with automation using Bash and Python scripts for instance scheduling.
- Migrate and optimize on-premise server to AWS cutting down the budget for unnecessary resources.
- Orchestrated the migration of legacy application from Alibaba Cloud to AWS.
- Led the migration of current kubernetes (external vendor) to internal with EKS and Rancher cutting down budget and dependant to external vendor.
- Review and improve alert and monitoring systems in Prometheus and Grafana.
- Centralized an internal documentation wiki, improving knowledge sharing among the technical team and shortening new employee ramp-up time by 50%.

Site Reliability Engineer

Rata.id

April 2020 - February 2022, South Jakarta, Jakarta, Indonesia

- Manage and monitored production, development, and staging environments in AWS.
- Utilized AWS services including EKS, ElasticBeanstalk, Lambda, EC2, S3, and RDS.
- Implemented CI/CD pipelines using Jenkins for auto-updating/deploying to ElasticBeanstalk and EKS.
- Set up alert and monitoring systems with Grafana and Prometheus.
- Assists developers in deploying new features in production environment.
- Monitored all resources and servers, ready for emergencies 24/7.

DevOps Engineer

Laku6.com

September 2019 - March 2020, Greater Jakarta Area, Indonesia

- Led the transition to microservices architecture using Docker and Kubernetes (GCP), resulting in a 50% decrease in downtime during deployments.
- Implemented CI/CD pipelines for automated the deployments.

- Alert and monitoring Kubernetes cluster with Grafana and Prometheus.

Backend Engineer

Authscore

February 2017 – September 2019, Bintaro, Indonesia

- Develop two-factor authentication and payment gateway systems.
- Tech stack including Golang (backend), Node.js (frontend gateway), CockroachDB (database), Redis (cache), and React.js (frontend).
- Utilized GraphQL and REST APIs for communication.

Freelance Developer (Upwork and Independent Projects)

November 2009 – October 2017

- **Application:** GIS apps with nodejs, Python scrapper, Simple chat application with MEAN(Mongo, ExpressJs, Nodejs, MongoDB) stack.
- **Github Action for Auto Deployment:** Develop and deployed Python Flask applications using GitHub Actions, managing secrets and environment tokens in private vaults.
- **Cloud Infrastructure:** Manage cloud infrastructure using AWS CloudFormation for auto-provisioning production stacks with EC2, Network Load Balancer, private VPC, and S3. Utilized Terraform for provisioning in EC2, Elastic Beanstalk, subnetting with VPC, integrating with application load balancers or network load balancers.
- **DevOps CI/CD:** Implement continuous integration and deployment pipelines for lightsail and EC2, also full-cycle auto deployment using drone.io and fastlane to automatically update beta version in playstore.
- **System Administration and Networking:** Built and managed an internet café in Yogyakarta using Mikrotik for bandwidth management and Squid transparent proxy with Linux IPFire for firewall.
- **Mail and Security Systems:** Deploy mail servers with Sendmail integrated with ClamAV and SpamAssassin on FreeBSD 7.0. Also developed an Intrusion Detection System with Snort integrated with Gammu SMS gateway using a PHP script as part of my thesis.
- **Infrastructure and Media Solutions:** Built private Storage as a Service using OpenStack Swift for scalable object storage. Set up media servers with Plex combined with mergerFS for disk clustering, utilizing Docker containers.

EDUCATION

Diploma, Computer Systems Networking and Telecommunications

Universitas Teknologi Digital Indonesia • 01/2008 – 12/2013

Bachelor's Degree, Information Technology

Universitas Teknologi Digital Indonesia • 01/2014 – 12/2017

SKILLS

Infrastructure: Terraform, Kubernetes, Docker, AWS (Cloud Front, Route53, Cloud Formation, EC2, S3, VPC, RDS, Lambda)

Tools: ELK stack, Jenkins, Grafana, Prometheus, Ansible

Programming & Scripting: Groovy, Lua, Bash, Python, Golang, Nodejs, HTML5, JavaScript, SQL, PHP

Databases: PostgreSQL, MySQL, MongoDB, Redis, CockroachDB, ElasticBeanstalk

Languages: Indonesian (Native), English (Native)
